**31. Disqualification from Office**

If you eventually learn that Donald Trump did interfere in the FBI investigation into Russia and the Trump campaign, is that something you feel would disqualify him from office, or would it not be serious enough for that?

# HOW THE POLL WAS CONDUCTED AND THE MARGIN OF ERROR CALCULATED

May 21, 2017

The CBS News 2017 Nation Tracker is conducted by YouGov using a nationally representative sample of 2,385 U.S. adults between May 17–19, 2017. 1,930 respondents were recontacted from panelists who had completed the March wave between March 15–19, 2017, or the February Wave between February 8–10, 2017. The recontact rate was 81%. The remaining 455 respondents were selected from 12,317 panelists who had completed a baseline interview conducted between January – May 2017.

Respondents were selected from YouGov's opt-in panel to be representative of all U.S. adults according to gender, age, race, education, and region (based on the American Community Survey, conducted by the U.S. Bureau of the Census). The responding sample was then weighted based on gender, age, race, education, 2012 and 2016 Presidential vote. The weights range from 0.15 to 6.46, with a mean of 1 and a standard deviation of 0.76.

The *margin of error* (a 95% confidence interval) for a sample percentage  $p$  based upon the entire sample is approximately 2.7%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and  $n$  is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
