# HOW THE POLL WAS CONDUCTED AND THE MARGIN OF ERROR CALCULATED

December 3, 2017

The CBS News 2017 Alabama poll is conducted by YouGov using a representative sample of 1,067 registered voters in Alabama between November 28–December 1, 2017.

Respondents were selected from YouGov’s opt-in panel to be representative of Alabama registered voters according to gender, age, race (based on the Voting and Registration supplement of the November 2016 Current Population Survey, conducted by the U.S. Bureau of the Census). The responding sample was then weighted based on gender, age, race, education, and 2016 Presidential vote. The weights range from 0.02 to 6.02, with a mean of 1 and a standard deviation of 0.76.

The *margin of error* (a 95% confidence interval) for a sample percentage  $p$  based upon the entire sample is approximately 3.8%. Vote choice questions are reported among an effective weighted  $N$  of 767 likely voters, and have a margin of error of 4.8%. The margin of error is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where  $CV$  is the coefficient of variation of the sample weights and  $n$  is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
