HOW THE POLL WAS CONDUCTED AND THE MARGIN OF ERROR CALCULATED

September 16, 2018

The CBS News 2018 Battleground Tracker is a series of panel studies in the United States. The poll is conducted by YouGov, an online polling company.

This poll interviewed 1104 registered voters in Missouri and was fielded between September 10–14, 2018.

The respondents were selected to be representative of registered voters in Missouri in terms of age, race, gender, and education. Of the 1104 respondents, 414 respondents were selected from YouGov's online panel, 318 respondents were selected from Precision Sample's online panel, 255 respondents were selected from SSI's online panel and 117 respondents were selected from Prodege's online panel.

The sample was weighted according to gender, age, race, education, and geography based on the American Community Survey, conducted by the U.S. Bureau of the Census, as well as 2016 Presidential vote. The weights range from 0.1 to 6.0, with a mean of 1 and a standard deviation of 0.7.

The *margin of error* (a 95% confidence interval) for a sample percentage p based upon the entire sample is approximately 3.3%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + \text{CV}^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
